ALLOWANCE

1. Claims 22-29 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Fuss et al. (U.S. Patent No. 6,401,119) is the closest prior art of record. Fuss discloses a network management system (i.e., a systems management system (SMS)) that monitors system workflow (i.e., the network management system functions as a workflow management system (WFMS)), detects disturbances in a system, and determines how each disturbance affects other hardware, software, and personnel operations throughout the system (col. 6, lines 20-35, 50-54, 60-65; col. 7, lines 1-24, 46-50; col. 8, lines 7-43; col. 8, line 66 through col. 11, line 8). However, Fuss does not teach or suggest that the SMS and WFMS are two separate systems that communicate with one another, thereby requiring performance of the following steps as part of these communications:

- providing a communication bridge between said SMS and said WFMS;
- involving said event server of said SMS into the communication bridge by
- involving a process monitor of said WFMS into event handling; and
- providing said process monitor with a set of predetermined rules in order to manage the impact of the error event on said impacted business processes.

The prior art of record fails to teach or suggest the combination of error event detection for "determining impacted business processes and activities within those

business processes which are impacted by said error event, including both (1) information on the impact of the error event on organization personnel monitored resources, including staff and people, of said distributed application and (2) information on the impact of the error event on information technology monitored resources, including hardware and software, of said SMS," wherein the distributed application is provided in a workflow management system (WFMS) such that the SMS and WFMS are two separate systems that communicate with one another, thereby requiring performance of the following steps as part of these communications: providing a communication bridge between said SMS and said WFMS, involving said event server of said SMS into the communication bridge by involving a process monitor of said WFMS into event handling, and providing said process monitor with a set of predetermined rules in order to manage the impact of the error event on said impacted business processes. This combination of features is recited in claims 22 and 26 and dependent claims 23-25 and 27-29; therefore, claims 22-29 are deemed to be allowable over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
